

## Empowering people with rare diseases

The Bulgarian Huntington Association is a public benefit NGO established in 2014. For the last 6 years the BHA has devoted itself to provide and improve access to care and services for people with rare diseases in Bulgaria.

The EmpowerRARE project aims to contribute towards reducing the social disparity in Bulgaria by empowering the socially vulnerable group of people with rare diseases, to participate in civil society and to initiate social policy reforms.

The EmpowerRARE project will help people with rare diseases achieve civic engagement and to formulate, based on their experience and needs, recommendations for desired national reforms and development of new services.

The project is done in partnership with the FRAMBU resource center for rare disorders in Norway.
