Establishing an Online Learning Platform on Rare Disorders
Sjelden.no

Elisabeth Bækken, Team leader digital learning
Norwegian National Advisory Unit on Rare Disorders

Background

The main task for the Norwegian National Advisory Unit on Rare Disorders is to ensure that people living with rare disorders and their families receive holistic and individually-based care. Our vision is to make rare disorders more known through knowledge and collaboration. The unit consists of nine national Centres of Expertise on Rare Disorders where patients, their families and professionals can seek help and advice.

Research and evidence-based knowledge show that lack of knowledge among professionals makes life more challenging for people with a rare disorder. In order to meet the needs for knowledge, the unit has established an open online learning platform; Sjelden.no. The word «rare» translates as «sjelden» in Norwegian, hence the name of the learning platform. The main goal is to make knowledge about rare disorders more easily accessible by providing access to high quality online learning resources. Sjelden.no is striving to maximize the learning outcome in a time efficient manner by incorporating learning methods that have been proved to give the best learning outcome.

Contents of Sjelden.no

Each centre of expertise takes initiative to make digital resources based on professionals needs. Depending on the size of the resources there will be established small project teams to follow up production.

Target groups
Professionals working in the field of rare disorders including sectors such as government, healthcare, school, kindergarten, special services etc.

Timeline

2015
- Preliminary project started in 2015
- Editor organization established

2017
- Web portal live
- Editorial project staff hired
- Learning resources produced

2019
- Sjelden.no became a permanent service
- Collaboration with Oslo University Hospital on education for medical specialists
- Collaboration with Inland Norway University on course about health pedagogy and rare disorders

Feedback from users

This course became an eye-opener for me on how important it is to be patient and not give up even though it seems as though the child is not showing much interest in the iPad.

Learner on course: Angelman and alternative, complementary communication

We ask the participants to take the online course before we meet. It makes the discussions in the meeting more interesting.

Physical therapist, Advisor on rare disorders
